- (54) Title: COLOR DISPLAY SCREEN COMPRISING A PLURALITY OF CELLS**

(57) Abstract: A color display screen has a plurality of cells (2). Each cell (2) has a pixel (P) capable of providing a first output light of a first color and a second output light of a second color and a photosensitive device (D) for converting an optical display control signal (Li) into electrical signals (I). The optical display control signal (Li) includes information about the first output light and the second output light to control the first output light and the second output light. The photosensitive device (D) includes a decoder (DM) for decoding the information about the first and the second output light.
